

Nemesis eH₂O is a powerful broad-spectrum disinfectant; killing 99.9999% of harmful germs (highly effective against viruses, bacteria and fungi). Importantly, Nemesis eH₂O contains no harmful chemicals or alcohol, so no PPE (other than a mask) is necessary for normal use.

Disinfection Strategy

In addition to appropriate hand washing procedures, frequently touched locations such as door handles, light switches, mobile phones, keyboards, desk and chair surfaces etc. should be frequently disinfected by spraying with Nemesis eH₂O. However, in order to disinfect spaces and surfaces that are difficult to access, fogging is an ideal solution – often conducted in conjunction with more frequent spraying of touch points.

Fogging

Foggers generate aerosolised particles of liquid Nemesis eH₂O at high speed, which allows fogging activities to penetrate areas remotely; disinfecting spaces very quickly.

All of the Nemesis eH₂O product sizes contain ready-to-use stabilised hypochlorous acid in either a hand spray or for use with a fogger.

Typically, 1 Litre of Nemesis eH₂O would be sufficient to fog a room of around 100m². Fogged Nemesis eH₂O should be allowed to settle onto all surfaces for 30 seconds to 1 minute before wiping off smooth surfaces such as table tops, sideboards and glass surfaces. **CAUTION:** Care must be taken with electrical equipment which is over 10 years old or has a water ingress protection (IP) rating of less than 5.

✓	Compliant	European Biocidal Products Regulations (Types 1, 2, 3, 4 & 5) and EN 1276, EN 13697, EN 13704, EN 14476 and EN 1656.
✓	Effective	Spraying or fogging delivers effective deactivation of harmful pathogens.
✓	Fast	Kills micro-organisms within seconds – much faster than bleach.
✓	Versatile	Approved for use as a spray or as a fog
✓	Safe	Contains no hazardous substances, so no COSHH or PPE
